FAST, FULLY AUTOMATED, FLOW-THROUGH PROVISIONING FOR BROADBAND COMMUNICATIONS PROVIDERS

The broadband business is built on speed. Faster connections, faster downloads — everything moves at the speed of light.

Except your provisioning system.

If you're going to compete at a world-class level, you need technology that can stand up to the challenge.

AAIS Broadband is a full-featured, automated system that provides a completely integrated environment for infrastructure and service order management and provisioning. It supports software and hardware from a multitude of vendors, and enables automated provisioning for a wide range of SMDS service request types.

THE BENEFITS: LOWER COSTS, HIGHER REVENUES, BETTER CUSTOMER SERVICE

AAIS Broadband can turn your back-office operations into the competitive edge you need to win in the marketplace. With AAIS Broadband, you'll be able to:

Drive Down Costs:

- Automated flow-through DSL assignment and activation minimizes manual input — and the opportunity for human error;
- Easy-to-use system requires minimal training time;
- Integrated, enterprise-wide inventory view for efficient resource management.

Increase Revenues:

- Integrated enterprise-wide customer and facility view lets service reps cross-sell and up-sell based on specific customer needs and network capabilities;
- Accurate view of all network resources and provisioned services speeds time-to-market — allowing new value-added services to be introduced much quicker.

Improve Customer Service:

- Real-time view of resource availability enables accurate scheduling;
- End-to-end flow-through provisioning enables quicker fulfillment of customer orders;
- Automated provisioning means fewer errors — and fewer complaints.

SYSTEM FEATURES:

- Scalable to meet present and future needs;
- Thin clients with Java front-end place the bulk of the activity at the server, for minimal footprint at the desktop;
- Integrates easily with hardware and software from multiple vendors, including Lucent, Alcatel, Newbridge, Cisco, Marconi, RedBack and Fujitsu.
- Supports provisioning of DSL, ATM, Frame Relay and SMDS;
- Element Management System (EMS) communicates with Order Manager, assuring flow-through success;

- Add new elements on the fly as needed;
- Automated ASR, DLR and LSR distribution;
- Auto-retry for non-fatal errors;
- Web access for occasional users.

Like all Verizon software products, AAIS offers you reliability and security unequalled in the industry. That's because Verizon OSS systems are built to the very highest standards: our own. As one of the world's leading telecom companies, Verizon won't just settle for a "best available" solution. When the right product doesn't exist, we create it.

AAIS, from Verizon:

We had to build it.

Now, you can buy it.
