THE POWERFUL PROVISIONING ENGINE THAT SCALES TO FIT YOUR NEEDS

In the competitive world of telecommunications service, you need every edge you can get. AAIS Narrowband, a fully automated flow-through provisioning system from Verizon, can transform your back-office operations into a strategic advantage.

AAIS Narrowband product was designed to handle the high transaction volume of the largest local phone company in the United States. The product is scalable to meet the needs of any telco, from the largest to the smallest, and is robust enough to handle most transactions with minimal human intervention.

One of the strongest features of AAIS is its flexibility. It integrates easily with other applications, and the simple point-and-click interface makes it a snap to add new switches or services.

THE BENEFITS: LOWER COSTS, HIGHER REVENUES, BETTER CUSTOMER SERVICE

Designed to grow with your business, AAIS is an ideal choice for service providers that plan to expand their business or add new network services in the future. With AAIS Narrowband, you'll be able to:

Drive Down Costs:

- Automated flow-through assignment and activation minimizes manual input — and the opportunity for human error;
- Easy-to-use system requires minimal training time;
- Integrated, enterprise-wide inventory view for efficient resource management.

Increase Revenues:

- Integrated enterprise-wide customer and facility view lets service reps cross-sell and up-sell based on specific customer needs and network capabilities;
- Accurate view of all network resources and provisioned services speeds time-to-market with value-added services.

Improved Customer Service:

- Real-time view of resource availability enables accurate scheduling;
- End-to-end flow-through provisioning enables quicker fulfillment of customer orders;
- Automated provisioning means fewer errors — and fewer complaints.

SYSTEM FEATURES:

- Express order provisioning for real-time, end-to-end activation and front-end closeouts;
- Real-time preorder and infrastructure negotiation for direct path assignment, address validation, telephone number section, and feature/facility validation;
- Loop makeup;
- Inventory, provisioning and service order management tasks are performed using simple point-and-click technology;
- Provisioning support for POTS, MLH, Centrex, ISDN, Voicemail, FX and OPX;

- Complies with regulatory mandates regarding new network technology, line sharing and TNP/LNP, inventory management, graphical frame management, cut sheet and work order management, office conversions, switch load balancing, and telephone and address management
- Thin clients with Java front-end place the bulk of the activity at the server, for minimal footprint at the desktop;
- Integrates easily with hardware and software from multiple vendors;
- Supports provisioning of Plain Old Telephone Service (POTS), Multi Line Hunt (MLH), Centrex, ISDN, Voicemail, Foreign Exchange (FX) and Off Premises Extension (OPX) services;
- Add new elements on the fly as needed;
- Auto-retry for non-fatal errors;
- Web access for occasional users.

Like all Verizon software products, AAIS offers you reliability and security unequalled in the industry. That's because Verizon OSS systems are built to the very highest standards: our own. As one of the world's leading telecom companies, Verizon won't just settle for a "best available" solution. When the right product doesn't exist, we create it.

AAIS, from Verizon:

We had to build it.

Now, you can buy it.
