March 6, 2002

Software enhancements (R3V23) to Verizon West (former GTE) Carrier Access Billing Systems (CABS) are scheduled for production April 1, 2002. With this release we will be implementing BOS 37. Listed below are the impacts to the customer.

OBF 2138 - Redefine and Evaluate the need for existing MECAB Data Elements

This issue introduced a new data element "END OFFICE SWITCHED OWNER ID" which is needed for the provider rendering the bill to identify the end office switch owner. This will be displayed on the usage bill pages.

OBF 1923 - SONET Ring Mileage

This issue introduced a new indicator "SONET RING MILEAGE TYPE IND" which will provide the ability to identify the CLLI code of the rating points when different from the physical location for Sonet Ring service.

OBF 2163 - LSO Information for Mileage Calculation

This issue introduced a new field "LSOC (Local Serving Office CLLI)" which will provide information to validate mileage on a facility access circuit. The CLLI code information will correspond with the LSO of the circuit and be displayed on the CSR.

Questions or requests for additional information may be directed to your Verizon Access Billing Representative.
