Dear Customer:

Verizon North, Inc. is filing amendments to its Indiana DC Power and Environmental Conditioning services (I.U.R.C. No. T-6) in order to redesign rates for DC Power and Environmental Conditioning. Verizon is redesigning the existing non-recurring charge for DC Power into three new non-recurring charges to facilitate cost recovery for new applications and future augment requests. Verizon is also reducing the billing increment for the DC Power monthly recurring charge from “per 40 load amps” to “per load amp.” In addition, the billing increment for the Environmental Conditioning monthly recurring charge is being amended from “per 40 amps” to “per load amp.” The underlying costs that support the redesigned DC Power and Environmental Conditioning rates remain the same. Verizon is also establishing a minimum DC Power order threshold of ten amps for each caged, cageless, and virtual collocation arrangement.

For your review, a copy of the pending amendments can be found on Verizon’s website at <http://www.verizon.com/tariffs>. Select the state of Indiana and click on “pending filings.” If after reviewing this filing you have additional questions regarding the amendments, please contact your respective CLEC Account Manager. Any CLEC wishing to provide comments to the Indiana Utility Regulatory Commission regarding these amendments should do so within 15 days of the posting of this notice.
