**Subject: Verizon Introduces IntelliLight® Optical Transport Service (IOTS)**

Verizon is pleased to announce the newest addition to IntelliLight Suite of Optical Services. IntelliLight® Optical Transport Service (IOTS) is now available in both the FCC No.14 and FCC No. 16 Access Tariffs for the former GTE territories. This filing was submitted under Transmittal No. 253 on October 17, 2002 and became effective November 1, 2002.

The IOTS offering provides a survivable DWDM base Metro ring platform for the delivery of a variety of protocols, speeds, and protection schemes. Verizon customers will select Node types and locations, while designing their own customized network. Diversely routed fiber paths allow Verizon to provide a one-minute service guarantee on all protected optical channels. Each Node location can support up to 64 unprotected or 32 protected optical channels carrying the following protocols: OC3, OC3c, OC12, OC12c, OC48, OC48c, ESCON, FICON, Fibre Channel, ETR, FDDI, ISC, Fast Ethernet, Gigabit Ethernet, and D1 Video. Nodes can be located at Verizon wire centers or customer designated premises. The service is available under three-year, five-year, or seven-year pricing plans.

Please contact your Verizon Account Manager with any questions or sales inquiries.
