PRIVATE IP INTERCONNECT & SECURE CLOUD SERVICES

Private IP Interconnect allows WAN providers to expand their global coverage without investing the physical resources required to do so.

Secure Cloud Interconnect offers resilient, scalable and private connections from Private IP to market leading cloud service providers in major data centers around the world.
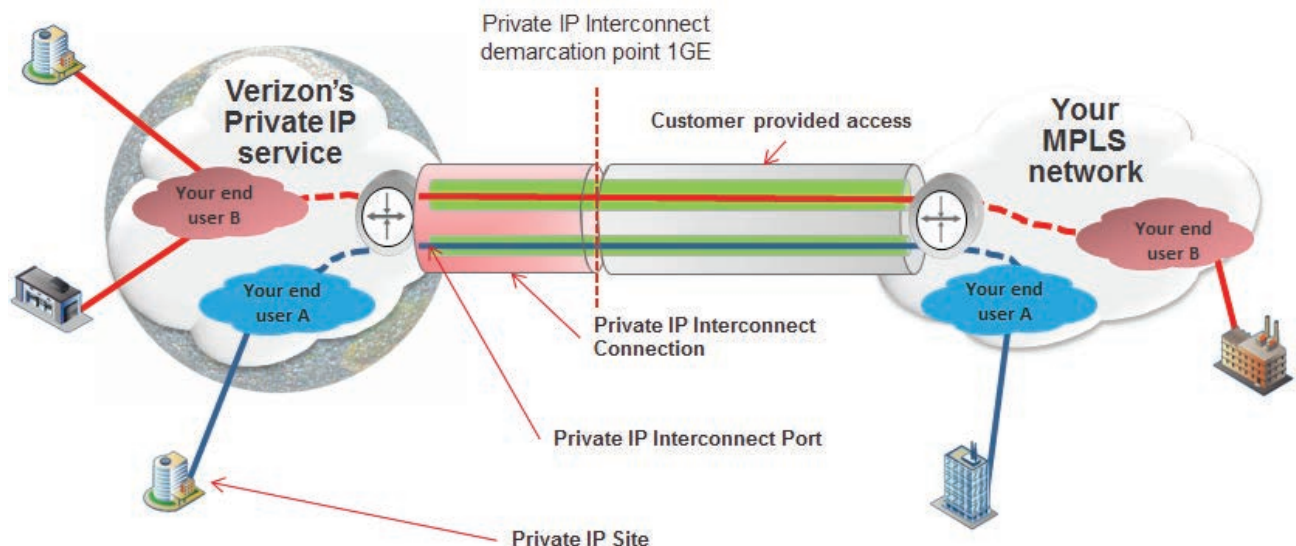

EXTEND YOUR REACH WITH CONFIDENCE

Your customers demand highly scalable, global connectivity options, but you're limited by the reach of your MPLS IP VPN service. Verizon's Private IP Interconnect can extend your geographic reach with Secure Cloud Interconnect enhancing the depth of applications that you can deliver to your end users.   Private IP Interconnect lowers your local access costs in regions or countries where you lack penetration, while Secure Cloud Interconnect allows you to connect your customers safely to cloud based applications via a large cadre of cloud providers.

Private IP Interconnect allows you to create your own footprint from Verizon's expansive global network. Private IP Interconnect gives you the ability to extend the reach of your own network by reselling Private IP purchased from Verizon in over 100 countries without network build-out or off-net extensions. Respond to your customers' need for a global VPN by providing them with Private IP at new sites quickly and cost-effectively.

What the service includes:
- Private IP Interconnect **Connection** (physical)
  - Available at 1G speed
  - Multiple Private IP Interconnect Connections
- Private IP Interconnect **Port** (logical)
  - Connects the Private IP sites that you have resold to your end user to their VLAN and sites on your network
  - Each Port can have its own speed, ingress and egress profile, and committed access rate (CAR)
  - Additional Private IP Sites can be resold to your end user and added to their VLAN as needed

Check out our **video**, and **fact sheet** summarizing the benefits of Secure Cloud Interconnect for your customer

Secure Cloud Interconnect enables you to deliver more value to your end users beyond the expanded global reach delivered by Private IP Interconnect. SCI is a virtual port on the end user's Private IP VLAN that enables traffic from their sites to flow over secure, private and resilient connections to their business applications in the cloud, avoiding the need for Internet break-out.
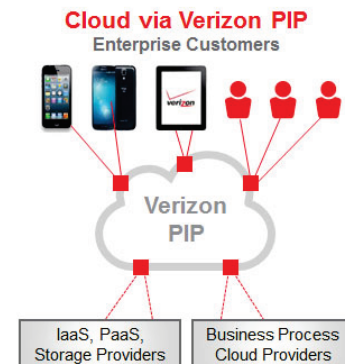

What the service includes:

- Multiple high-speed, diverse interconnections to market leading cloud providers in major data centers located in North and South America, Europe and Asia Pacific
- Private interconnections from the end user's Private IP networks to their selected cloud providers and locations
- A web-based portal that enables you to self-administer your end user's SCI services
- True usage-based billing plans, based on traffic not port size

RELIABLE, SECURE ACCESS

SCI doesn't just provide secure, reliable access to major cloud providers; it does so without exposing traffic to the Internet. Because the service runs through our Private IP network, no access lines are required; there is faster turn-up and the integration is seamless, saving your customers time and money. In addition, we offer a variety of usage-based billing plans to help track and control costs.

Secure Cloud Interconnect is built on one of the world's largest global IP networks, with 24x7 customer service and strong service level agreements.
