

ETHERNET VIRTUAL PRIVATE LINE.

Better experience. Better business results. Better peace of mind. Better matters.

Highly available, private network connections so you can extend locally, globally, or into the cloud.

Connecting people, places, things. Simply, securely, reliably.

Better experience.

Ethernet Virtual Private Line (EVPL) is part of Verizon's Global Ethernet product portfolio and is built on the Converged Packet Access (CPA) architecture using a Multi-Protocol Label Switched (MPLS) core network.

Ideal for linking multiple locations across a city, state, country or the globe, EVPL can connect data centers, LANs, and remote sites with point-to-point and point-to-multipoint connections. EVPL offers speeds ranging from 1M to 1GB, along with 10GB Ethernet Access (EA) connectivity for some configurations.

Better business results.

EVPL can help improve business results by offering:

- Extensive geographical coverage.
- Multi-service access (*can purchase other services via same interface*), decreasing equipment/power requirements and driving cost efficiencies.
- VLAN tagging enabling multiple EVPL circuits into a single hand-off.
- Effective means to manage network costs with less overbuilds.
- High Quality of Service.
- Granular bandwidth flexibility.
- SLAs for MTTR and network availability.

Better peace of mind.

Verizon has proven to be one of the most dependable and reliable wholesale providers of network services in the world. We offer a full suite of technology solutions to our wholesale customers.

Verizon makes it easy for you to package solutions right for any application.

With Verizon, you also get a team of experienced individuals who will work closely with you and **help you succeed.**

Serves 96% Fortune 1000 companies with our technology solutions.

Verizon deployed **the first** standards-based multivendor 100 Gigabit Ethernet link for an IP backbone on a portion of Verizon's European long-haul network and extensively in the Domestic US network **increasing capacity and performance for our customers.**

Verizon was **the first** to deploy eight-way undersea mesh technology, which provides diverse paths for voice and data traffic reliability.

Better matters.
