1.1 Change Log

The following table documents all major changes to the Test Deck since the August 2016 publication, Version 29.2

Change Number	Scenario Number	Description of Change	Changed from Version
1	ALL	Update with CTE actuals	29.2
1	ALL	Update with Production results	30.0

1.2 Overview

The purpose of the Verizon East – Northeast Quality Baseline Validation Test Deck is to provide CLECs/Resellers with typical wholesale Pre-Ordering and Ordering scenarios and the corresponding messages and LSRs. This test bed contains only a subset of the possible scenarios for a CLEC/Reseller. These scenarios are not comprehensive and it is not recommended that these be the only scenarios tested by the CLEC/Reseller. They should be used as a starting point.

The Verizon East – Northeast Quality Baseline Validation Test Deck is a regional test deck serving Connecticut, Massachusetts, New York and Rhode Island. This test deck replaces the former Verizon East - NY and New England Quality Baseline Validation Test Decks. As such, individual test cases yield Input

and Output

messages which would be valid throughout the seven regions this test deck serves. For example, since EDI and EDI systems operate in the same fashion throughout the seven regions, a given Pre-Order or Order Transaction would have the same Input

and Output

messages in any of the seven regions, with the exception of certain obviously variable data like telephone numbers and addresses.

For Pre-Ordering and Ordering scenarios, the LSOG9 standard is used.

For Pre-Ordering scenarios, a sample inbound request and the corresponding outbound response have been provided. For Ordering scenarios, the LSR, the inbound EDI request, and the outbound EDI response (Local Response) are provided.

The Pre-Order and Order Outbound responses may be expected results. As such, the Pre-Order outbound response may include a place holder for certain message text information and not the actual message text as part of the expected result. In addition, both the Pre-Order and Order responses may include fictitious dates in the header information.

The Pre-Order and Order, PON, DDD, D/T SENT and INIT fields may have different values on the Input

and Output

for a given scenario since this information is currently expected results
